

## Encourage skin cell rejuvenation with a naturally-derived alpha and beta hydroxyl acid chemical peel.

Do you want to revitalize and resurface your skin? One way is with alpha and beta hydroxyl acids. They are natural derivatives of fruit and citric acids, and help reduce oiliness and sun damage while encouraging cell rejuvenation.

This gentle chemical peel safely targets and removes a thin layer of damaged skin, promoting new cell growth. The results are often instantly noticeable – a younger, cleaner, more vibrant complexion.

These are some of the results that can occur after a chemical peel:

- Promote cell rejuvenation
- Control oily skin
- Decrease the appearance of acne
- Stimulate natural cell production
- Brighten complexion
- Soften skin
- Increase moisture retention

- Diminish fine lines

**How do you know if a chemical peel is right for you?**
